✦ Quote of Month

"If you just set out to be liked, you would be prepared to compromise on anything at any time, and you would achieve nothing."

Margaret Thatcher

✦ Not So Funny Business

This is the story of four people named Everybody, Somebody, Anybody, and Nobody.

There was an important job to be done and Everybody was asked to do it. Anybody could have done it, but Nobody did it.

Somebody got angry about that, because it was Everybody's job. Everybody thought Anybody could do it, but Nobody realised that Everybody wouldn't do it.

Consequently, it wound up that Nobody told Anybody, so Everybody blamed Somebody.

 [E-mail Archiving and Disaster Recovery in a Single Appliance](#)

Business cannot function without email. With over 40% of users checking their email every few minutes, IT managers have had to improve the availability and speed of their messaging platforms, as well as manage increasing email volumes.

Email has emerged as the de facto information management platform, which presents a serious business challenge: Although email systems excel at quickly distributing information, most simply fail at reliably storing and providing immediate access to the 83% of business-critical data that they now contain.

Find out more about NorthSeas Email Archiving Appliance delivering a Vendor Neutral approach to email archiving and Disaster Recovery. View white paper. [view white paper](#)

 [Picture-Perfect Storage 'MyPhotoAlbum.com'](#)

Snap-happy shutterbugs are forcing the free online photo-sharing service myphotoalbum.com to nix its managed storage solution for an in-house product from ONStor.

Hosting more than 22 million photos, three-year-old MyPhotoAlbum.com expects to reap better overall pricing and storage scalability for its current and future storage requirements with ONStor and Nexsan, according to Chris Ferry, director of operations at MyPhotoAlbum.com.

 [Technology Corner - D2D2T \(Disk to Disk to Tape\)](#)

-
Traditionally, many businesses have done backup directly to relatively inexpensive tape systems. However, for many computer applications, it's important to have data immediately ready to be restored from a secondary disk if and when the data on the primary disk becomes inaccessible (for example, if the server fails). The time to restore data from tape would be considered unacceptable. On the other hand, tape is a more economical alternative for long-term storage. Because it's also more portable, tape is often used for off-site backup and restoration in case of a disaster.
